

NoiseTools Software

Features

- For Optimus Sound Level Meters and doseBadge Noise Dosimeters
- Download measurements and produce noise reports
- Review measurements and summary reports on screen
- Print or export reports
- Link measurements to people, places or projects
- Share measurements and reports
- Configure the noise meter or dosimeter
- Free software, no licence restrictions

Applications

- Noise analysis and reporting
- Occupational noise assessments
- Environmental noise surveys and reporting

Noise Analysis and Reporting Software

The NoiseTools software is included with the data logging versions of the Optimus sound level meters and doseBadge noise dosimeters. Its purpose is to configure the meter, download the measurements and produce concise noise reports.

There are no licence restrictions with this software and it is provided free of charge. You can download it from the NoiseMeters Support web site.

This software supports multiple sound level meters and noise dosimeters, listing them by model and serial number. Some of the features of the NoiseTools software are meter specific. For example, the frequency content reports are only available for sound level meters fitted with octave or 1/3 octave band filters.

System Requirements

NoiseTools is compatible with Windows 7, 8, 8.1, 10 (32 bit and 64 bit) and 11.
